

## Analyst Programmer Regulatory Reporting Application (Brussels)

### **The organisation**

Financial Markets is part of a worldwide organisation there is much cross-border activity in the team.

As part of regionalized IT team supporting European sites in production with the OMR/ATLAS2/Infocenter /Data warehouse standard architecture, the FA/FiRE Competence Center Europe (FCE) has been created. This team supports the European branches by fulfilling their local regulatory reporting requirements, notably by providing automatic data feeds.

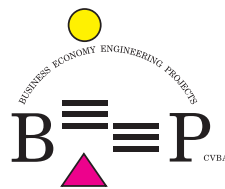

To achieve this objective, we build and maintain the data interfaces between our systems and third party providers regulatory reporting software, which is in most cases FRSGlobal (DataFoundation / „FiRE“ / ReportGenerator).

### **The function**

In our Developers team, in order to give a support during the migration you will be responsible for the conception, development, integration/deployment, maintenance and support of our products. Therefore, you will have to communicate regularly with all our contributors on technical but also functional level, especially to analyze the business requirements, to discuss the solutions with our provider, to help the users during the UAT and to discuss the issues with our internal/external contributors. You will also take part in Workshops on European sites (not more than 2-3 days per month)

### Periodic Activities

- Requirement analysis, concept definition and implementation/documentation of Infoc2DF (interface) for new countries together with the integration/test of the country specific FA/FiRE modules.
- Programming in Oracle PL/SQL
- Job automation with CA Unicenter NSM and powershell (Windows) or AIX shell (Unix) scripting
- attendance of local workshops together with local users to analyze local requirements and local data sources.
- Writing of the technical specification
- Support of local users during the test and validation phase as well as in production.
- Coordination of technical items together with local users,

- Maintenance and support for our product
- Report generation with Business Objects
- Execution of non-regression tests in case of:
  - + New versions of upstream systems
  - + Changes in the parameterization of the source systems
  - + Changes in the regulatory requirements, which result into releases of FRSGlobal DataFoundation / ReportGenerator parameterization

### Non-periodic activities

- Handling of incidents
- Direct contribution to operational permanent control framework.
- On-call support (every six weeks)

### **Your profile**

Bachelor / master degree in Information technology (ideally combining a business background)

Financial skills would be a plus

3 – 5 years working experience

### Skills

#### 1. Essentials

- Fluent English in speech and writing paired with good communication skills
- Strong ORACLE database development background –programming in PL/SQL; SQL
- Strong analytical skills / ability to quickly acquaint yourself fast with various facts and systems
- Ready to travel (approx. 3 nights per month during projects)
- Experience in financial/banking activity, ideally in reporting

#### 2. Other

- Script programming under Windows and Unix
- Report development under BusinessObjects
- Basis on SVN or CVS (source code versioning)
- Work in a CMMI environment would be a plus
- Experience in IT projects having more than 9 months duration
- French would be a plus
